DETAILED ACTION

Continued Prosecution Application

1. The request filed on 1/10/2003 for a Continued Prosecution Application (CPA) under 37 CFR 1.53(d) based on parent Application No. 09/241515 is acceptable and a CPA has been established. An action on the CPA follows.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the flat display, liquid crystal display device, FED, EL, Plasma, transmissive, reflective and passive devices, apparatus coupling to computer and memory for storing information in dynamic presentation region must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1,19 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. First medium being non-

electronic is not fully explain in figures and in a specification, examiner do not see in a specification a word mention as a non-electronic.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

6. Claims 1,2,3,10,14,18,19,20-21,28,31,32,35,37 is rejected under 35 U.S.C. 102(e) as being anticipated by Ceccarelli (U.S. Patent No. 6,222,532).

As per claims 1, 19 Ceccarelli teaches an apparatus for providing a pictorial representation (In Abstract):

Comprising at least one static presentation region for providing at least a first (In fig.5), unchanging rendering and at least one dynamic presentation region adjacent to at least one static region (Control button In Fig.5), dynamic presentation region (In Col.4 lines 55-56) providing at least a first series of changing renderings, said static presentation region being cast in a first medium and having a plurality of openings formed therein, openings accommodating the dynamic presentation medium which is cast in a second medium (In Col. 4 lines 48-67 to Col.5 lines 1-6 and Col.5 lines 23-40).

As per claims 2,3,20,21 Ceccarelli teaches plurality of static and dynamic regions (In Fig.5).

As per claim 10, 28 Ceccarelli teaches pictorial representation is an artistic rendering (In col.2 lines 8-10).

As per claim 14,32 Ceccarelli teaches dynamic presentation is a mechanical structure (In Fig.5).

As per claim 18,37 Ceccarelli teaches a memory for storing information to be presented in dynamic presentation region (In Fig.5).

As per claim 35, Ceccarelli teaches a pictorial representation a computer environment (In Fig.5).

As per claim 31, Ceccarelli teaches a static presentation regions may be changed (In Col.5 lines 23-40).

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 4-9,15-17,22-27,33-34,36 rejected under 35 U.S.C. 103(a) as being unpatentable over Ceccarelli (U.S. Patent No. 6,222,532) in view of Novich (U.S. Patent No. 5,811,926).

As per claims 4-9, 22-27 Ceccarelli does not show an apparatus is a liquid crystal display, flat device display, FED, EL, plasma device and group of reflective devices and combination.

Novich teaches an apparatus is a liquid crystal display, flat device display, FED, EL, plasma device and group of reflective devices and combination (In Col.1 lines 31-39).

It would have been obvious to one of ordinary skill in the art, at the time of the invention was made, to allow different types of display device taught by Novich with the display device of Ceccarelli because it would have provided a improved image resolution and faster data image transfer.

As per claim 15-17,33-34,36 Ceccarelli does not teach a projected image and a holograph image region apparatus that connected to I/O for coupling. It would have been obvious to one of ordinary skill in the art that the user could conform and performed particular dynamic image object before editing the operation so it would have communicated portable and also connected with a computer with a network is well known in the art.

Response to Arguments

9. Claims 1,19 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure, which is not enabling. "Non-electronic" first medium critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). . First medium being non-electronic is not fully explain in figures and in a specification, examiner do not see in a specification a word mention as a non- electronic.
